

# Elevator Subtraction

**Goal:** Practice subtraction while racing to the bottom of the building!

**You will need:**

- Chalk
- One Dice

**How to play:**

- This game is for 2 to 4 players.
- Draw a building with chalk that has at least ten floors. Label each floor with its number.
- Everyone starts on the top floor. Highest roll goes first.
- First player rolls the dice. The player will subtract the number on the dice from the floor they are on and move to the floor that equals the difference.
- A player's turn is over if they roll a number larger than the number of floors available to move.
- Take turns until someone reaches the first floor! Whoever gets there first, wins!

**To think about:**

- What would an equation look like to represent how many floors a player moved?
- What businesses are on each floor of the building? Come up with ideas of your own or look at *Elevator Magic* for inspiration.
