

Exploring Zero

Goal: Find the container with zero!

You will need:

- 5 to 10 containers
- Printed “0” number cards (or write “0” on sticky notes)
- Objects that fit in the containers

What to do:

- Place 0 to 10 objects randomly in all of the containers. Make sure to leave one or more containers empty.
- Give the player the zero number cards and ask them to place the zero number card(s) in front of the containers that are empty.

Alternate ways to play:

- Print or write out 0 to 10 number cards. Have the player label all of the containers with the correct number card.
- Ask your child to remove the number cards and change the quantity of items in each container. Make sure they keep at least one container with the quantity of zero. Then ask them to label the containers with the correct number cards.
