

Try in 5

This is a game for 2 players.

Goal: Guess your partner's number in 5 guesses or less.

You will need:

- Crayons, markers, or counters
- Number Chart (100, 50, 30, 20, or 10 chart depending on players)

How to play:

Player one chooses a number that appears on the chart. Player one may write the number down, but does not share the number with player two.

Player two asks questions about the number. For example, "Is the number greater than 7? Is the number an even number?" Player two uses crayons, markers, or counters to cross off the numbers on the chart that cannot be the number. For example, if the number is more than seven, then numbers one through six would be crossed off or covered.

To win a round of the game, the number must be guessed in five questions or less. Player one must keep track of the number of questions asked.

Players alternate turns.
